Professional Summary

Passionate Senior Software Engineer with over 5 years of experience specializing in backend and iOS development. Strong academic background with a Master's degree in Information and Software Engineering. Proven expertise in building clean, scalable, and user-friendly solutions for healthcare and e-commerce domains. Successfully transitioned from backend architecture to iOS development, bringing unique full-stack perspective to mobile applications. Experienced in modern Swift development, MVVM architecture, and building production-ready applications serving thousands of users. Currently developing MyStor, a cross-platform mobile application for connecting homeowners with household service workers.

Professional Experience

Mobile Developer (Personal Project) Jan 2026 - Present
Remote

MyStor - House Workers Platform

- Developing cross-platform mobile application for Android and iOS to connect homeowners with household service workers
- Building comprehensive platform enabling users to find, hire, and manage house cleaners, gardeners, and other home service professionals
- Implementing user-friendly features for service booking, scheduling, and payment processing
- Designing intuitive interfaces for both service providers and customers
- Managing full development cycle from concept to deployment on both App Store and Google Play

Swift SwiftUI Kotlin Android SDK REST APIs Firebase Git

iOS Developer Oct 2025 - Dec 2025
Remote

KnightX

- Developed e-commerce iOS applications with focus on user-facing features using SwiftUI
- Implemented MVVM and MVVM-C architecture patterns for maintainable, testable code
- Leveraged modern async/await networking patterns for efficient API communication
- Delivered responsive, high-quality shopping experiences optimized for various iOS devices
- Collaborated with cross-functional teams to ensure seamless feature delivery

Swift SwiftUI Combine MV/MVSU Async/Await Networking Git REST APIs

iOS Developer Mar 2023 - Oct 2025
Remote

Glooko (Diabetes Management Platform)

- Transitioned to iOS team to develop features for diabetes management app used by thousands of patients
- Implemented precise blood glucose level tracking and insulin dose calculation features ensuring medical accuracy
- Led refactoring initiative to modernize legacy UI into SwiftUI components, improving code maintainability
- Architected and improved app structure using MVVM pattern with Combine framework
- Spearheaded development of device management module for Bluetooth medical device integration
- Collaborated closely with product managers and UX designers to ensure accessibility and usability for medical users

Swift SwiftUI Combine MVVM Unit Testing Core Data Git REST APIs

Backend Developer Apr 2022 - Mar 2023
Remote

Glooko (Diabetes Management Platform)

- Contributed to backend infrastructure of diabetes management platform tracking medical data for patients globally
- Designed and implemented robust data models for blood glucose and insulin usage tracking
- Established service-to-engine integrations enabling seamless data flow across microservices
- Played key role in shaping microservice architecture and infrastructure decisions
- Implemented backend logic for secure medical record handling and data synchronization across devices
- Ensured HIPAA compliance and data security standards for sensitive health information

Python FastAPI PostgreSQL Docker AWS Microservices REST APIs Git

Backend Developer Mar 2021 - Apr 2022
Remote

Code Consulting | Cadence

- Led backend development for healthcare project focused on weight and blood pressure monitoring
- Set up complete project infrastructure from scratch including API design and database architecture
- Designed and implemented RESTful APIs following healthcare data standards
- Ensured secure and reliable data handling aligned with medical standards and regulations
- Integrated third-party services for enhanced monitoring capabilities

Python Flask PostgreSQL Docker AWS Git REST APIs

Code Consulting

- Developed online fitness platform backend during COVID-19 lockdown period
- Built scalable backend services using Node.js and AWS Amplify supporting high user traffic
- Implemented automated financial report generation for trainers and gym owners
- Designed GraphQL API for efficient data querying and real-time updates
- Managed user data and authentication using AWS services

Node.js AWS Amplify GraphQL DynamoDB Git REST APIs

🔑 Key Achievements

- Successfully transitioned from backend to iOS development, becoming proficient in Swift and modern iOS frameworks
- Led refactoring initiative at Glooko, modernizing legacy codebase to SwiftUI improving maintainability
- Developed critical medical device management features ensuring precision and safety for diabetes patients
- Built scalable microservices architecture handling sensitive healthcare data with HIPAA compliance
- Established complete project infrastructure from scratch for multiple healthcare applications
- Currently developing and launching MyStor, a cross-platform marketplace app connecting homeowners with service professionals

< > Technical Skills

iOS Development

Swift SwiftUI UIKit Combine MVVM Async/Await Core Data Unit Testing Xcode

Android Development

Kotlin Android SDK Jetpack Compose Android Studio

Backend Development

Python Node.js FastAPI Flask GraphQL REST APIs Microservices API Design

Databases & Cloud

PostgreSQL DynamoDB Firebase AWS Docker Git CI/CD

Domain Expertise

Healthcare/Medical Apps E-commerce Marketplace Platforms Data Security HIPAA Compliance Agile/Scrum

🎓 Education

Bachelor of Informatics - Information Systems

2015 - 2018
Croatia

Faculty of Organization and Informatics

- Bachelor's Thesis: Social network data analysis

Master of Informatics - Information and Software Engineering

2018 - 2020
Croatia

Faculty of Organization and Informatics

- Master's Thesis: Machine learning in data analysis of social network
